

Engineering secure, intelligent systems for enterprise.

H&O Global LLC, operating through Bella Tech, provides enterprise technology consulting, engineering, and talent solutions. We help organizations assess, architect, build, modernize, secure, and operate technology environments.

Data & AI

Platforms, engineering, production AI

Cloud & Platform Engineering

Architecture, modernization, reliability

Software & Enterprise Architecture

Custom software, APIs, integration

AI Governance & Security

Policy, identity, controls, observability

Cybersecurity & Identity

Security architecture, IAM, cloud security

Talent Solutions

Recruitment and flexible workforce

WHO WE ARE

Consulting, engineering, and specialized talent.

H&O Global LLC, operating through Bella Tech, provides enterprise technology consulting, engineering, and talent solutions. Our capabilities span Data & AI, AI Governance & Security, Cloud & Platform Engineering, Cybersecurity & Identity, Software & Enterprise Architecture, and specialized technology workforce solutions.

We help organizations assess, architect, build, modernize, secure, and operate technology environments through advisory engagements, architecture and roadmaps, implementation, embedded delivery, and project teams. Our technical capabilities include AI and data architecture, responsible and agentic AI governance, cloud architecture and modernization, identity and access management, cybersecurity architecture, custom software and API engineering, data engineering, and enterprise platform solutions.

That works two ways: engagements where Bella Tech owns the outcome end to end, and talent engagements where we extend a team you already have, from the same practice base, under one accountable partner.

Capabilities

Data & AI

Enterprise data platforms, data engineering, analytics, and production machine learning and LLM systems, designed so the data underneath them can be trusted.

AI Governance & Security

A cross-disciplinary specialization spanning Data & AI and Cybersecurity & Identity. Governance architecture, AI agent identity and authorization, data governance for AI, responsible AI controls, and AI observability and auditability.

Cloud & Platform Engineering

Cloud architecture and landing zones, modernization, DevOps and platform engineering, and the reliability practices that keep an estate operable as it grows.

Cybersecurity & Identity

Security architecture, identity and access management including non-human and workload identity, cloud security posture, DevSecOps, and compliance readiness.

Software & Enterprise Architecture

Custom software and API engineering, integration architecture, platform modernization, and solution architecture that connects to the systems an enterprise already runs.

Two Ways to Work With Us

Enterprise Consulting

Defined technology outcomes, delivered end to end, with Bella Tech accountable for the result.

- Assessments
- Architecture & Roadmaps
- Implementation
- Embedded Delivery

Talent Solutions

We help enterprises identify, assess, recruit, and engage specialized technology professionals and teams.

- Direct Hire / Permanent Placement
- Technical Recruitment & Specialized Search
- Contract Talent and Contract-to-Hire
- Project Teams
- Candidate Sourcing & Screening
- Workforce Development / Training

One practice base sits behind both. The engineers who set our delivery standards are the ones who screen the people we place, which is why candidates are evaluated with technical context rather than matched on keywords.

How Engagements Are Structured

1 Assessment

Establish the current state, the risks, and the realistic options.

2 Architecture & Roadmap

A target design and a sequenced path to it, costed and prioritized.

3 Implementation

Bella Tech owns delivery of the defined outcome.

4 Embedded Delivery

Our practitioners work inside your program, reporting into your leads.

Industry Focus

Bella Tech is set up to work in regulated and data-sensitive environments, where security, identity and auditability are part of the requirement rather than a later addition. Target industries include:

- Healthcare
- Legal & Professional Services
- Education
- Financial Services
- Enterprise SaaS
- Government & Public Sector

Working With Bella Tech

Bella Tech can participate in client-defined sourcing, contracting, third-party risk, supplier onboarding and purchasing processes appropriate to the engagement, including established MSP, VMS, prime contractor or approved supplier structures where appropriate.

Security, privacy, data handling and third-party risk requirements are addressed according to the scope and requirements of each engagement. Where a framework or regulation applies to the work, we design against its requirements and produce the evidence your risk and audit functions ask for.

Bella Tech does not certify organizations and does not guarantee regulatory compliance.

Company Information

LEGAL ENTITY H&O GLOBAL LLC	DOING BUSINESS AS Bella Tech
LOCATION Fishers, Indiana, United States	SERVICE COVERAGE National (United States)
